SUMMARY

1.5+ years turning operational chaos into decision-ready data. Built dashboards tracking multi-crore tender portfolios, automated workflows saving manual effort, and shipped self-service analytics across Google Workspace and Looker Studio. I thrive on experimenting with new technologies, pushing beyond comfort zones, and constantly up-skilling myself.

TECHNICAL SKILLS

Languages	: Python, SQL
Libraries	: Pandas, Numpy
Tools	: Google Workspace, Looker Studio, Visual Studio Code, MySQL, Git, Excel
Other	: Exploratory Data Analysis, Data Cleaning, Dashboard design, Workflow Automation, Cross-functional Communication

EXPERIENCE

Data Analyst <i>MCPL</i>	March 2025 - current Indore
• Cleaned highly unstructured and incomplete tender data for usability in analysis. • Created dashboards for project tracking and cost monitoring, working closely with railway officers to ensure usability. • Built a Unit Price Matcher tool using fuzzy logic to solve a real business problem in tender processing. • Enhanced and automated dashboards, streamlining reporting and increasing speed. • Built advanced Google Sheets solutions, decreasing reliance on manual processes. • Developed an expense automation system with approval flow, replacing manual tracking processes. • Introduced automation across teams by setting up email reminders and workflow triggers, reducing delays in execution.	
Data Analyst Intern	Sep 2023 – Dec 2023
• Established foundational skills in Advanced Excel, Google Workspace, Looker Studio, and KPI tracking to support data analysis. • Built a smart Attendance Management System using Google Forms and Google Sheets with:Geo-location tracking for attendance validation Automated calculations for late arrivals, working hours, and attendance summaries. • Automated manual attendance processes, improving accuracy and reducing administrative effort. • Acquired practical experience in data organization, reporting, and workflow automation to streamline processes.	

EDUCATION

CDGI /RGPV <i>Bachelor of Technology in Artificial Intelligence and Data Science</i>	Indore, MP 2021 - 2025
--	---------------------------

PROJECTS

Railway Tender Financial Performance Dashboard (Internal Project – Confidential Data)

Tools: Google Sheets, Looker Studio

- Tracked a multi-crore tender pipeline with 6 custom KPIs — replacing scattered spreadsheets with a single always-current dashboard.
- Year-wise billing vs. collection analysis exposed collection lag, enabling proactive follow-ups that improved payment timelines.
- Risk indicators flagged active tenders as high-risk in the first review cycle, enabling early intervention before delays escalated.

Expense Approval Workflow Automation (Internal)

Tools: Sheets, Apps Script

- Built an end-to-end expense automation system using Google Sheets and Apps Script, replacing manual WhatsApp-based tracking.
- Designed a custom, intuitive expense submission form for non-technical users, with dynamic dropdowns to ensure accurate and standardized data entry.
- Implemented a structured approval workflow with real-time notifications, enabling seamless submission, review, and decision-making.
- Streamlined the reimbursement process, reducing delays and improving transparency across departments.

Video Game Success Analysis (Personal Project – In Progress)

Tools: Python (Pandas), SQL, VS Code

- Cleaned and manipulated a gaming dataset — resolved missing values, duplicates and label inconsistencies using Pandas to produce analysis-ready data.
- Engineered features and used SQL to quantify how genre platform drive game performance over time.
- Will built a findings dashboard — designed to replicate product-insights work done inside gaming/tech product teams.
